

Meridian Logistics Operations Manual

Document OPS-MAN-01 | Master edition 2025 | Operations Department

This manual consolidates the operating procedures of the line-haul, warehousing, fleet and customer service functions. It is the controlled reference document for operational staff and supersedes all previously issued departmental instructions.

Contents

1. Network and Depot Structure
2. Booking and Order Intake
3. Pickup Scheduling
4. Consignment Documentation
5. Loading and Load Planning
6. Line-haul Dispatch
7. Transit Monitoring
8. Delivery and Proof of Delivery
9. Returns Handling
10. Claims and Damaged Cargo
11. Warehousing and Put-away
12. Stock Counts and Reconciliation
13. Fleet Maintenance Scheduling
14. Driver Management
15. Fuel Management
16. Customer Service Standards
17. Escalation Matrix
18. Performance Reporting
19. Subcontractor Management
20. Appendix A: Standard Forms
21. Appendix B: Depot Contact Register
22. Appendix C: Route Timings

1. Network and Depot Structure

1.1

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

1.2

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

1.3

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

1.4

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

1.5

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

1.6

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

1.7

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

1.8

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

1.9

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

2. Booking and Order Intake

2.1

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

2.2

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

2.3

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

2.4

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

2.5

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

2.6

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

2.7

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

2.8

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

2.9

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

3. Pickup Scheduling

3.1

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

3.2

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

3.3

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

3.4

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each

morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

3.5

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

3.6

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

3.7

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

3.8

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

3.9

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

4. Consignment Documentation

4.1

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

4.2

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

4.3

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

4.4

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

4.5

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

4.6

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

4.7

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

4.8

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

4.9

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

5. Loading and Load Planning

5.1

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

5.2

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

5.3

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

5.4

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

5.5

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

5.6

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

5.7

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

5.8

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

5.9

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

6. Line-haul Dispatch

6.1

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

6.2

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

6.3

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

6.4

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically

in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

6.5

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

6.6

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

6.7

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

6.8

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

6.9

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

7. Transit Monitoring

7.1

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

7.2

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

7.3

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

7.4

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

7.5

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

7.6

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

12.7

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

12.8

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

12.9

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

13. Fleet Maintenance Scheduling

13.1

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

13.2

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

13.3

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

13.4

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

18.7

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

18.8

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

18.9

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

19. Subcontractor Management

19.1

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

19.2

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

19.3

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

19.4

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each

morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

19.5

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

19.6

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

19.7

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

19.9

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

20. Appendix A: Standard Forms

20.1

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

20.2

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

20.3

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

20.4

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

20.5

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

20.6

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

20.7

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

20.8

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

20.9

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

21. Appendix B: Depot Contact Register

21.1

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

21.2

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

21.3

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

21.4

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

21.5

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

21.6

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

21.7

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

21.8

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

21.9

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

22. Appendix C: Route Timings

22.1

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

22.2

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

22.3

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

22.4

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically

in the transport management system.

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

22.5

All communication with the client regarding this activity is routed through the assigned account coordinator. Operational staff do not contact clients directly except where a safety issue requires immediate notification.

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

22.6

The relevant form is completed in duplicate. The original is filed at the depot and the copy is scanned into the consignment record within twenty four hours of completion.

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

22.7

Any deviation from this procedure requires prior written approval from the operations manager. Retrospective approval is not granted and deviations without approval are treated as a process breach at the monthly review.

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

22.8

Staff performing this activity must have completed the associated induction module. The training register is maintained by the depot supervisor and audited twice yearly.

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

22.9

Equipment used in this activity is subject to the preventive maintenance schedule in section 13. Faulty equipment is tagged out and reported the same day.

Responsibility for this activity rests with the depot supervisor, who may delegate it to a shift lead but retains accountability for the outcome. Records are retained for a minimum of three years.

Where an exception arises, the operations coordinator records it in the daily exception log with the consignment reference, the nature of the exception and the action taken. The log is reviewed each morning at the operations stand-up.

Timings quoted in this section are indicative for planning purposes and are measured from the recorded gate-in time rather than the scheduled time. Variances beyond fifteen percent are flagged automatically in the transport management system.
